Learning Outcomes for class IX (August, 2020)

1. The students would be able to- State both the laws of chemical combination with examples.
2. Analyse the importance and interdependence of both the laws of chemical combination on each other and relate the postulates of Dalton's atomic theory with the laws of chemical combination
3. The students would be able to differentiate between an atom and a molecule. Write atomicity for similar and dissimilar elements.
4. Students will able to comprehend and recapitulate the content taught to do the workbook of atoms and molecules.
